

Data Collection and Preprocessing Phase

Date	15 July 2025
Name	Sanika Suresh Patil
Project Title	Restaurant Recommendation System
Maximum Marks	2 Marks

Data Quality Report Template

Data Source	Data Quality Issue	Severity	Resolution Plan
Dataset (Restaurant reviews and metadata)	Missing values in fields like restaurant name, location, or ratings	Moderate	Perform data imputation using techniques like mean/mode for numeric values and most frequent value for categorical data. Alternatively, remove rows with critical missing fields.

Dataset (User reviews)	Duplicate user review entries	Low	 Remove duplicate records using drop_duplicates in pandas or SQL DISTINCT queries. Use datetime parsing libraries (e.g., pandas.to_datetime) to standardize all date/time fields.
Dataset (Timestamp field)	Inconsistent or incorrect timestamp format	Moderate	

Dataset (Restaurant metadata)	Inconsistent formats (e.g., location written in different ways like "NY", "New York")	Moderate	Apply data standardization techniques, using string functions or regex patterns to unify the format.
Dataset (User preferences)	Sparse data or insufficient user history	High	Implement fallback strategies such as popularity-based or content-based recommendations when user data is lacking.
